It only takes the gelatine il/2 hours to solidify in the thermos bottle so that it is usually left in the hole only fifty minutes after the rods reach the bottom, just long enough to get a good etching. It may be left in the hole over night, however, but in that case the acid is diluted more. When the tube is brought to surface the North and South I tubes. It will be noted that for these larger tubes the correction is only 3 at 45, which is the maximum. The angle can be read to y2 and I feel certain that the results of tests for inclination can be relied upon to within i. To determine the course of the hole the tube is placed in the goniometer with the graduated circle set at O0 so that the tube is vertical. If the inclination of the hole is steep the tube is twisted until the etching shows the dip to be either directly toward or away from the eye; that is, until the crosstread bisects the ellipse etched on the glass. If the inclination is shallow it is more accurate to twist the tube so that the dip is to the right or left of the observer and in the plane of the graduated circle. The goniometer is next placed on a protractor so that..
